PROJECTS

WEVR
Mobile application
- It is an environment to serve the customer by facilitating the process of buying and renting apartments. Where the environment works as a broker, through a mobile application.
- work init for dashboard with livewire
- deploy project on cpanel
- link : https://github.com/Amirnagy/wevr-backend

SPORTIFY
Mobile application
- An application that aims to showcase players by displaying their skill and level and creating a Reels system like Instagram
- work on it on API
- link :https://github.com/Amirnagy/sport

CHAT REALTIME API
Mobile application
- implementing a real-time chat API using the Laravel framework. In this project, I developed a robust and scalable chat system that allowed users to engage in real-time conversations across web and mobile applications. My responsibilities included building the API endpoints
